A coast artillery installation is located four kilometers southwest of Miedzyzdroje (Misdroy = 054/141), on a cliff which is about 80 meters inland from the Baltic Sea and 50 meters high. The surface of the cliff is about two kilometers square; it is covered with evergreen trees. A barbed wire fence surrounds the height and an area of two kilometers on each side.

Ten long-range guns are emplaced at 50-meter intervals on the crest of the cliff; they are pointed out to sea. The barrels are described as being 15 meters long and wide enough at the muzzle to accommodate an average man (sic). The guns are mounted on round concrete bases 1,30 meters high; the bases are surrounded by a low wall. Between the wall and the base of a gun there is a passageway wide enough for one man at a time. The gunner is located on the right hand side of the weapon. The gun moves on round rails after firing. Each gun carriage is protected by a reinforced concrete roof about one meter thick; the entire emplacement is camouflaged with green wire net.

than emplacement is connected with an undergound bunker by three passage. ways. The bunkers are rectangular in shape and large enough to hold 30 people. The bunker is divided into two parts, one of which is about one-third of the size of the second. Each part has a separate entrance but the compartments are connected by an iron door. A narrow gauge railway runs into the larger of the two. All the bunkers are connected by an underground passageway.

An ammunition magazine is located in front of each bunker. The magazines are connected with the emplacements by narrow gauge railways; each has an ammunition carrier (lorki). The distance from magazine to gun emplacement is 200 meters.

The entire area has an undetermined number of anti-aircraft guns. A worker at the installation stated that the total was 30.

- 6. Barracks within the area are former German buildings; the Poles have rebuilt them and added other buildings. Nost are either one or two stories high. It is estimated that there are about 3,000 men stationed in the compound.
- 7. The installation is guarded by walking and stationary sentries. The main gate, on the road from Niedzyzdroje and Dziwna about five kilometers from the former, is always guarded by at least two sentries.
- 8. Three kilometers from Niedzyzdroje on the road to Swinoujscie (Swinomuende) there is an abandoned artillery installation; of the four guns, two are uprooted as a result of world War II bombings. The guns are the same as those described above except that they are of smaller caliber. It is believed that this installation has now been reactivated.

	Comments:	25X1
1.	the largest range-finder on the coast was under construction in Miedzyzdroje.	25 X 1
2.	The location of the military and WOP barracks agrees with the	25 X 1
